

Assignment 1: Personal Portfolio Page (v1)

Assigned: Session 3 • Due: Session 5 • Individual

Overview

Build a single-page personal portfolio using only HTML and CSS. This is your first graded project and focuses entirely on semantic markup and visual styling — no JavaScript is required or expected at this stage.

Learning Objectives

- Write valid, semantic HTML5 markup
- Apply CSS selectors, the box model, and typography to style a page
- Structure accessible content (labels, alt text, logical heading order)
- Practice organizing a real front-end project with a clear file structure

Requirements

- A single HTML page using semantic elements (header, nav, main, section, footer — not just divs)
- At least four content sections: Hero/Intro, About Me, Skills, Contact
- A custom external stylesheet (no CSS frameworks such as Bootstrap)
- At least one image with meaningful alt text
- A contact form with labeled inputs (name, email, message) — it does not need to submit to a real backend
- A consistent visual style: consistent color palette, font choices, and spacing throughout
- No inline styles (`style=""`) and no unused/leftover CSS rules

Technical Specifications

- File structure: `index.html`, `/css/style.css`, `/images/`
- HTML should have no major validation errors (use the W3C validator to self-check)
- Code should be indented consistently and free of commented-out dead code

Submission Guidelines

- Submit a link to a GitHub repository containing your project, OR a zipped project folder
- Include a short README.txt or comment block noting anything you'd like the grader to know

Grading Rubric

Criterion	Points	Description
HTML structure & semantics	25	Correct use of semantic tags, logical document outline, valid markup
CSS styling & visual design	25	Thoughtful use of color, typography, spacing; cohesive look and feel
Content completeness	20	All four required sections present with real content
Accessibility	15	Alt text on images, associated form labels, sensible heading order
Code quality & organization	15	Clean file structure, consistent formatting, no inline styles or dead code
Total	100	

Note: Submissions that do not run, fail to load, or throw uncaught errors on open may receive a substantial deduction across all criteria, since graders cannot evaluate functionality that isn't demonstrable.
